

Flash Cards Privacy Policy

flashcards@frankpoon.com
frankpoon.com

What data do we collect?

Most of our data is collected either through voice input, which includes set queries, or via the Quizlet API, which includes detailed results of requests given by users, as well as associated metadata. However, we don't keep any data collected this way, besides the linked Quizlet account given by users - which is stored by Google. We will collect analytics data. In the future, we may collect individual usage data in Flash Cards, such as recent and most viewed sets.

How do we use the data we collect?

We only use the data we collect to maintain and deliver Flash Cards' function; that is, to test users on the Quizlet sets they request. In the future, if we collect individual usage data, we will use that mainly to improve our service overall, such as delivering a more personalized experience to our users.

What data do we share?

Under normal circumstances, besides Google and Quizlet, who are essential for our service, we share absolutely no data to third parties. However, we may share data with necessary parties only to comply with applicable law, as well as Google and Quizlet's Terms of Service.

How can users access their data?

Users cannot access analytics data because it involves information on other users. If we store individual data in the future that is not handled by Google or Quizlet, we will provide a way to access that data by requesting it from us. We have the right to deny requests if we suspect that the use of this individual data may be violating applicable laws or Google and Quizlet's Terms of Service.

Changes

We may change our privacy policy at any time; we will provide the most recent amend date at the bottom of this page. If we modify our privacy policy in a way that significantly affects the privacy of our users, we will notify them.
